phone and fax: 0777 13 431
koref.tamps@gmail.com
The Turning Wheel: 0149 149 408
ttwheel@gmail.com (after 2 oct)
Book soon. We have limited places.

About The Turning Wheel: Fedde Jorritsma got his master degree in environmental studies in the Netherlands, worked 4 years as trainer on practical solutions for sustainable living in Central Asia and did an intensive course (EMAS) on how to make sustainable technologies from local materials. Fedde decided to spread this knowledge on his way to Europe by bicycle. See: www.theturningwheel.org

In the last weeks we constructed different solar water heating systems at KOREF from local materials between RM300 and RM600 for 100 - 200 liters of hot water stored in a insulated tank.

About KOREF: KOREF is the first Certified Organic Rice Farm in Malaysia, sprawling over 260 acres. It provides farmstays with life enriching programmes. The environment is unique: close to nature and health improving. A perfect place to relax and learn. See: www.organic-kahang.com

The program: During the 1st day, the principles of solar water heaters (SWH) will be presented, different types can be tested. In the evening a movie will be shown. The next day we use our hands and get practical skills. In a special designed exercise participants will learn how to install the solar collector.

The Turning Wheel - An Educational Cycle Expedition about simple technologies for sustainable living
